# Full Stack Development

## Python + React/JS Track

Powered By

**BOTTEGA**

### Track Description

This comprehensive full stack development track focuses on teaching Python and React; two of the industry's leading languages for job demand, and projected growth.

Students learn the fundamentals of computer programming, gain a greater understanding of object-oriented programming, and learn modern front-end and design principles.

### Track Key Competencies

- ◆ Web Development Foundations
- ◆ OOP Foundations (Python)
- ◆ OOP Advanced Skills (Python)
- ◆ Adv. Web Development (React/JS)
- ◆ Database Foundations
- ◆ Developer Soft Skills
- ◆ Job Preparation

### Track Materials

- ◆ Bottega's top-of-the-line learning management system (LMS), DevCamp, provides a dynamic learning experience by delivering learning materials and interaction for every student's success; our curriculum targets the skills necessary for real world application.
- ◆ Students must have access to a desktop or laptop (preferably Mac) that is less than 3 years old, 2.7 GHz/i5 - i5 processor and has 8 GB of RAM and 500 GB SSHD \*No exceptions\*. Students connecting remotely need access to a web cam and microphone for remote conferencing.
- ◆ Stable, high-speed internet and secondary monitors are helpful.

### Grading System

- ◆ 450 – 500 points = A
- ◆ 400 – 449 points = B
- ◆ 350 – 399 points = C
- ◆ 300 – 349 points = D
- ◆ Below 299 points = F

### Time To Complete

Full Time

- ◆ Video Viewing: 700+
- ◆ Assigned Projects: 15
- ◆ FT In-Class Projects: 4+
- ◆ Examinations: 2

FT Total Hours: 600

# Curriculum Overview

## CS 277 Intro to Programming (Python)

Introduces fundamental concepts of computer programming; such as structure, syntax, problem solving, data types, decision logic, loops, functions, arrays, and more.

Recommended 3.0 Credits

## CS 301 Front End Foundations (JavaScript)

Covers design and development of browser-based programs; teaching generation of HTML via JavaScript, debugging, web server communication, and use of XML and JSON.

Recommended 3.0 Credits

## CS 497 Advanced Web Development (React)

Development of complex web applications, Including: web security, data markup languages, server side scripting, web database interactions, web service architectures, etc.

Recommended 3.0 Credits

## CS 384 Advanced Python Development

Covers advanced Python concepts, such as: scripting, dynamic typing, iterators, generators, coroutines, modules, packages and scope, runtime services, data wrangling, etc.

Recommended 3.0 Credits

## CS 382 Database Foundations

Introduces theory, concepts, architecture, and use of database management systems (DBMS). Presents common database models and languages used in both local and client/server databases.

Recommended 3.0 Credits

## Python + React/JS

Recommended 15 Credits

### Python

A object-oriented programming language that empowers both novice and experienced programmers to create a wide variety of application types.

### React/JS

A powerful javascript library that handles data dynamically and aims to provide speed, simplicity, and scalability to user interfaces.

# Track Itinerary

Full-Time Program

## Track Breakdown

Pre-Work  
(Prerequisite) Course

Python + React/JS

15+ Projects

12 Weeks

Instructor Led

40+ Hours  
Per Week

600 Hours  
To Complete

# 1:3

### Instruction : Application

Students that enroll in the full-time program will attend instructor-led classes that have a ratio of 1 hour of devCamp curriculum to 3 hours of application minimum. Application consists of: project building, code submissions, note-taking, code alongs, in-class assignments, mentor sessions, additional reading, review, homework, etc.

# 12

### Weeks To Graduate

This 600 total hour track that students must complete includes an introductory “pre-work” course and the full stack python + react software development track. Students undergo intense and immersive training in modern coding techniques and job readiness training.

# Program Expectations

## Daily Schedule

**9:00 am**

Class Starts

**9:30 am**

Daily Challenge

**10:15 am**

Morning Break

**10:30 am**

Lecture/Coding

**12:00 pm**

Lunch Time

**1:10 pm**

Lecture/Coding

**3:00 pm**

Afternoon Break

**3:15 pm**

Lecture/Coding

**4:30 pm**

Project Lab

**5:00 pm**

Class Ends

## Come Prepared

During this course you will live and breathe code. This course was designed to be fully immersive—challenging your skills and abilities—and it constantly builds off of the knowledge you obtain in the days and weeks prior.

Our goal is to enable you to meet new challenges head on, with skills and learning opportunities meticulously chosen based on industry expectations and hiring standards.

We understand certain priorities exist in life, however showing up late, tired, or mentally unprepared to learn will severely limit your ability to learn the concepts and technologies within the course material.

Channel your inner boy- or girl-scout and come prepared!

## Teaching Strategies

As a blended learning course, teaching methods include skill demonstration through: audio visual materials, case studies, practical exercises, discussion, learner presentations, classroom exercises, laboratory, lecture, and computer-based training.

## Attendance Policy

Passing the class requires a 95% attendance and full participation, including but not limited to: completion of assigned homework, participation in challenges, syllabus work, group activities, job preparation, and interview availability.

## Assignments & Grades

Students must complete class assignments, quizzes, tests, and projects as assigned by the course facilitator.

Overall grade must be a minimum of 70% (C) in order to earn credit for the course.

\*Part-Time expectations vary slightly and will be discussed in your new student orientation.

# Full-Time Itinerary

Week 1

## Curriculum Topics

- ◆ Intro to SCSS
- ◆ SCSS Basics
- ◆ SCSS Mixins
- ◆ Advanced SCSS
- ◆ CSS Grid Basics
- ◆ UX For Developers

- ◆ UI For Developers
- ◆ Intro To Python

## Projects

- ◆ Flexbox Mixin (SCSS)
- ◆ Search Engine Site (Front End)
- ◆ Flexbox Capstone (CSS)
- ◆ Portfolio Website (UX)
- ◆ In-Class Assignments

Week 2

## Curriculum Topics

- ◆ Python Data Structures
- ◆ Python Loops
- ◆ Python Conditionals
- ◆ Python Methods and Functions

## Projects

- ◆ HTML Generator In JavaScript
- ◆ Fizz Buzz in Python
- ◆ Python Coding Exercises
- ◆ In-Class Assignments

Week 3

## Curriculum Topics

- ◆ Importing Modules In Python
- ◆ OOP in Python
- ◆ API Development
- ◆ Mongo Databases
- ◆ JavaScript(JS) Basics
- ◆ JS Conditionals
- ◆ JS Functions
- ◆ JS Arrays and Data Structure
- ◆ JS Loops and Iterators
- ◆ Modern JS Development

## Projects

- ◆ Web Scraper in Python
- ◆ Mongo Database Management
- ◆ JS Coding Exercises
- ◆ Hello World Application in Flask
- ◆ In-Class Assignments

## Curriculum Topics

## Projects

- |                          |                              |                                 |
|--------------------------|------------------------------|---------------------------------|
| ◆ Modern JS Development  | ◆ Git Basics                 | ◆ Create/Delete List Items (JS) |
| ◆ OOP in JavaScript (JS) | ◆ Git Branches               | ◆ In-Class Assignments          |
| ◆ JS Promises            | ◆ Git Conflicts              |                                 |
| ◆ JS Async and Await     | ◆ Git Reverting workflows    |                                 |
| ◆ Modern JS Tools        | ◆ Intro to JS in the Browser |                                 |
| ◆ Error Mgmt. in JS      | ◆ JS and the DOM             |                                 |
| ◆ JS Modules             |                              |                                 |
| ◆ JS Package Mgmt.       |                              |                                 |

## Curriculum Topics

## Projects

- |                             |                    |                                |
|-----------------------------|--------------------|--------------------------------|
| ◆ JS Browser Tools          | ◆ State in React   | ◆ React Madlib Application     |
| ◆ React Tutorial            | ◆ Working with Git | ◆ Refactoring Date Picker (JS) |
| ◆ Intro and Setup for React |                    | ◆ Dinner Menu (React/JS)       |
| ◆ React Components          |                    | ◆ In-Class Assignments         |

## Curriculum Topics

## Projects

- |                         |                    |                                |
|-------------------------|--------------------|--------------------------------|
| ◆ App in a Day Thursday | ◆ React Routes     | ◆ API Search Engine (React/JS) |
| ◆ Deploy to Heroku      | ◆ Setting Up Redux | ◆ Group Project (React)        |
| ◆ Vanilla JS            | ◆ Redux DevTools   | ◆ In-Class Assignments         |
| ◆ CSS Grid              |                    |                                |
| ◆ React Routes          |                    |                                |

## Curriculum Topics

## Projects

- ◆ In class review for first 2 days
- ◆ SQL System Config
- ◆ SQL Creating, Reading, Updating and Deleting
- ◆ SQL Advanced Queries
- ◆ SQL Functions
- ◆ SQL Control Flow
- ◆ SQL Relational Queries
- ◆ SQL Advanced
- ◆ Redis Install
- ◆ Redis Commands
- ◆ Redis Hashes
- ◆ University SQL Database – SQL
- ◆ Build Redis Database – Redis
- ◆ In-Class Assignments

## Curriculum Topics

## Projects

- ◆ Job Preparation
- ◆ Refractor CSS Grid
- ◆ Bug Fixes
- ◆ Form Data in React
- ◆ Map Data To a Form
- ◆ Parse a Date in JS
- ◆ Redux in the App
- ◆ Reusing React Components
- ◆ Button Animations CSS
- ◆ Property Management App (React/JS)
- ◆ In-Class Assignments

## Curriculum Topics

## Projects

- ◆ Mock Interviews
- ◆ Resume Preparation
- ◆ Creating React Components
- ◆ Build Header and Nav Bar
- ◆ Building a Sign Up Form
- ◆ Creating Routes
- ◆ Building The Cart
- ◆ eCommerce Shop – React/JS
- ◆ In-Class Assignments

## Curriculum Topics

## Projects

- ◆ Mock Interviews
- ◆ Resume Preparation
- ◆ Creating Components
- ◆ Add Products to a Cart
- ◆ Building Payment Forms
- ◆ JSX for Shipping Form
- ◆ Working with Sign In Data
- ◆ eCommerce Shop (React/JS)
- ◆ In-Class Assignments

## Curriculum Topics

## Projects

- ◆ Job Preparation
- ◆ Mock Interviews
- ◆ Python Review
- ◆ Whiteboarding
- ◆ About Me's
- ◆ React/Redux Review
- ◆ Group Projects
- ◆ Personal Capstone Project
- ◆ In-Class Assignments

## Curriculum Topics

## Projects

- ◆ Job Preparation
- ◆ Mock Interviews
- ◆ Vocab Review
- ◆ JavaScript Review
- ◆ App in a Day Planning
- ◆ Whiteboarding
- ◆ Graduation
- ◆ Personal Capstone Project
- ◆ App in a Day
- ◆ In-Class Assignments
